PROFESSIONAL SUMMARY

Software Engineer at Al-Monafiss Stores (Monafiss) with hands-on experience building and maintaining production mobile applications published on the App Store and Google Play, along with the backend systems, ERP integrations, and internal business tools that power them. Skilled in Flutter for cross-platform development and in backend work with NestJS, React, and SQL. Proven ability to deliver complete, real-world systems end to end — from automated ERP synchronization and HR/payroll modules to fleet management and management reporting apps.

TECHNICAL SKILLS

- **Mobile Development:** Flutter, Dart — cross-platform apps published on App Store & Google Play
- **Backend:** NestJS, REST API design & integration
- **Frontend:** React
- **Databases:** SQL (MySQL), Firebase
- **Systems & Integration:** Automated ERP data synchronization, online payment gateway integration, scheduled jobs, data migration
- **Admin Panels:** Laravel / Filament (used in production dashboards)
- **Tools & Practices:** Git & GitHub, VS Code, Android Studio, Agile teamwork

PROFESSIONAL EXPERIENCE

2025 – Present

Software Engineer — Al-Monafiss Stores (Monafiss), Jeddah, Saudi Arabia

- Develop and maintain Monafiss Market, an on-demand grocery-delivery app (35–50 min delivery) published on the App Store and Google Play and rated 4.0★ — featuring integrated payment gateways (Mada, Visa, Apple Pay), an in-app wallet with automatic refunds, and live driver tracking on the map; shipping weekly updates.
- Built and published Monafiss Driver — the driver app with order dispatch, live GPS tracking, barcode scanning, and proof-of-delivery photos — plus a centralized admin dashboard that manages both the driver app and the Monafiss Market customer app from one place.
- Designed and built an automated ERP synchronization service that pulls data from the company ERP and pushes it to the mobile apps on a configurable schedule (multiple times per day) — syncing offers, prices, and inventory, and automatically enabling or disabling promotions.
- Developed an HR module that calculates employee salaries and manages leave balances.
- Implemented in-app messaging, fleet management, and a comprehensive reporting suite across the platform.
- Leading an ongoing ERP data migration from the company's legacy system to a newly adopted ERP.
- Building "Roeya", a mobile reporting app that surfaces Monafiss Market analytics so managers can review business performance anytime, without opening a laptop.

Jan 2025 – Mar 2025

Application Developer — The Hope International, Jordan

- Developed and maintained cross-platform mobile applications using Flutter (Dart).
- Designed responsive interfaces and implemented efficient navigation and state management.
- Integrated RESTful APIs to connect apps with backend services for smooth data flow.
- Collaborated with designers and backend developers; participated in testing, debugging, and deployment on Android and iOS.

PERSONAL PROJECTS

Etar — Published iOS App (2025)

- A booking platform for event photographers and service providers, published on the App Store under my own developer account. Users browse providers, portfolios, and pricing, pay securely in-app, chat with providers, and manage bookings — backed by a dedicated admin dashboard. Designed and built end to end.

BuzzIt (2025)

- Barber appointment booking app with streamlined service selection and scheduling.

Daily Task Manager (2025)

- Task management app with reminders, priorities, and a points-based motivation system.

EDUCATION

2025

B.Sc. in Software Engineering — Philadelphia University, Jordan

COURSES & LANGUAGES

- Courses: Flutter Mobile Development (32h), Dart, SQL.
- Languages: Arabic (Native), English (Conversational).
